

myqub

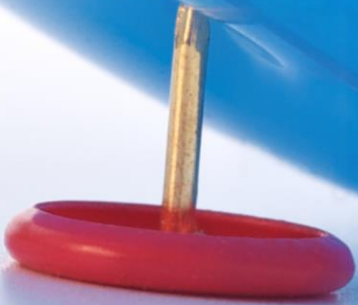

**PROBLEM.**

**The construction sector is one of the largest sources of waste in the world**

A red pushpin is pinned to the bottom left corner of a blue sheet of paper. The paper is slightly curved and has a soft shadow on the white surface below it.

## **PROBLEM.**

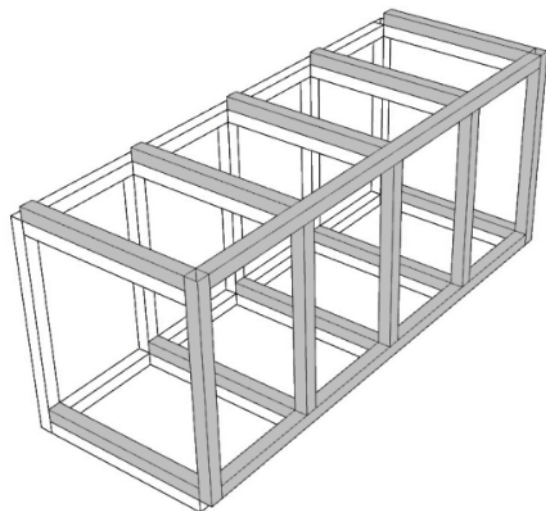

**According to the European Commission, construction and demolition activities account for around 35% of all waste in the European Union, generating around 450 million tonnes of waste each year.**

**According to the European Construction Industry Federation, the construction sector experiences the most significant labor shortages within the European Union.**

**Reducing the environmental impact of the construction sector requires responsible and measured use of materials, which not only saves money and costs, but also increases the attractiveness and affordability of the product.**

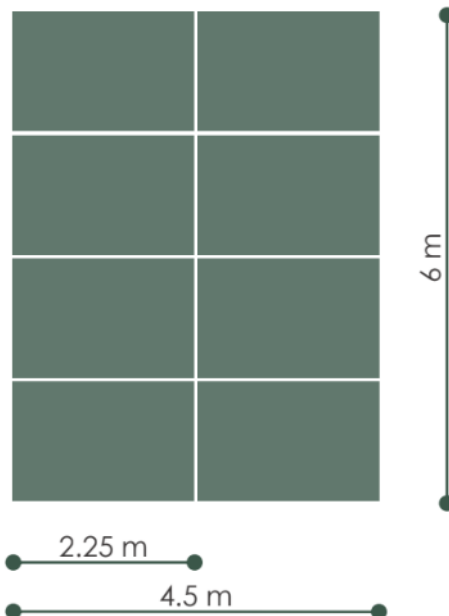

# SOLUTION.

## ASSEMBLY Main steps

# What is **my qub**?

A new **construction system** that allows:

Build A++ homes

Manufacturing in a factory with sustainable materials

Waste **5%** instead of the European average of **35%**

On-site installation **300%** faster

**Three times less labour required**

# **17 years**

**in the constructions and development**

**Arrivederci to chaos, and buongiorno to smart living**
